ACOR

ACOR – ALL CYCLING OFF/ON ROAD

ACOR, the brand which comes from "Acorn" - a symbol of patience and the achievement of hard work. An English proverb states that Great oaks from little acorns grow, urging the listener to wait for maturation of a project or idea. At ACOR, we are doing and following this spirit.

The industry and markets we serve are dynamic, changes occur rapidly, and product innovations are expected. Our leadership in the industry has been earned by our continuous efforts in research and development. Innovation and improvement is deeply embedded in ACOR.

The core principle upon which ACOR was founded lies within our commitment to develop innovative technologies that will redefine the cycling experience. At ACOR, our primary focus has been and will continue to be fulfilling our dedication to reinvent the bicycle components and accessories through our expertise and know-how in the fields of bicycle manufacturing and material technologies.

ACOR is proud to be recognized internationally for the ingenuity of our manufacturing, product innovation, and our commitment to further technological breakthroughs. ACOR is flexible and able to respond quickly to changing market expectations and demand. Through strong research and development supported by manufacturing technologies and processes, ACOR provides a broad range of bicycle components and accessories of the highest quality to meet market trends. Combining CNC processing with high grade materials, such as aluminum and titanium, we produce products of exceptional quality and extraordinary versatility, all of which meet EN standards.

We offer our customers the perfect balance of functionality, aesthetics and experience. These values are the core of our business. In order to completely understand and incorporate these values into the newest products it is of paramount importance to explore the future.

Nowadays ACOR brand is distributed worldwide in more than 20 countries. We are a company where expertise matters. Our focus in achieving the highest standards in everything we do is a clear reflection of the outstanding products we make. Driven by innovation, excellence and a refusal to conform, we are continuously searching to improve our products. A product symbolizes our evolution.

Any ACOR cyclist is familiar with the beauty of the journey: the wind blowing your hair, your bicycle flying over the road. To enjoy the cycling on/off the road, it is ACOR!

Nothing looks like Titanium, Nothing Rides like Titanium, Titanium will never let you down.

Titanium is phenomenally well suited to bicycle frame construction. Its strength to weight ratio is excellent, its fatigue strength and fracture toughness unparalleled, and it will not corrode under atmospheric conditions. Titanium is tough, but it has a softer side. It has a flexibility that absorbs road vibrations, allowing you to ride in comfort even when pushing hard over rough ground. It will not rust, no matter how bad the weather gets. That's its softer side on display again and again, giving a little when it needs to. No wonder we offer a lifetime guarantee on every frame.

ACORti ADVANTAGES

- ACORti titanium products have a strength-to-weight ratio that is on average 75% greater than most aluminum and steel materials used in cycling
- ACORti titanium products have a fatigue life that is five times greater than that of steel or aluminum. This means that your frame will have a significantly longer life span than other bicycles.
- Every frame we make uses custom drawn tubing that is designed to maximize strength and performance by using differing diameter and thickness of tubing for each size and application.
- ACORti uses precise shape optimized cold worked and stress relieved (CWSR) titanium tube sets to produce our award winning ride for every frame we make.

ACORti – LEADERSHIP THROUGH INNOVATION

ACORti has successfully applied its aerospace manufacturing experience in titanium alloy technology to the production of bicycle components. Our use of custom drawn and cold worked high-quality seamless Ti3AL/2.5V titanium alloy tubes and the use of superb welding workmanship results in high-quality high-performance products. We are also very experienced in making bicycle frames to custom specifications. These frames are based on the customers' needs or rider's biometrics and the characteristics that they require in a bicycle. Not only do these frames excel in quality and performance, but they demonstrate our engineering and manufacturing abilities and flexibility to meet each customer's individual needs.

At ACORti, we take the design, fabrication, and material selection process very seriously, creating the best product possible for the intended application; making bikes go fast and last a long time. These are just a few of the reasons why our frames and components are leading the industry when it comes to innovation and craftsmanship.
