

ACOR

2021 PRODUCTS AND ACCESSORIES

2021

CONTENTS

A person is riding a bicycle at night, silhouetted against a background of blurred city lights and traffic. The image has a greenish tint and a large, semi-transparent circular graphic on the right side. The person is wearing a helmet and a backpack. The bicycle has a front light and a rear light. The background shows horizontal streaks of light from buildings and traffic, suggesting motion and a busy urban environment.

At ACOR, we stand for achievement through workmanship. Our refinement and quality can be seen in every aspect of our products and service. Like the great oak emerging from a humble acorn, we too have grown strong through dedication, experience, trial and development.

ACOR is committed to developing innovations that redefine the cycling experience. Our principle focus has been to increase our expertise in bicycle components to deliver the best function and value to our customers across our myriad of product categories.

We are able to adapt to changing market demands and lead in emerging areas such as e-bikes and drop-bar categories using manufacturing processes that are cutting edge and reliable. ACOR products meet and often exceed the safety and performance standards established by our industry.▲

A person stands next to a bicycle on a wet pavement at night. The scene is dramatically lit with red light, which reflects on the wet ground and illuminates the person and the bike. In the background, there are silhouettes of high-voltage power lines and a tall industrial smokestack with some lights at the top. The overall mood is industrial and mysterious.

COLD WORKED

ACORTi titanium is cold-worked to ensure proper hardness and fatigue strength of our tubes. Though this technique is more costly, it is a process in which we are insistent.

OPTIMALLY TUNED

By varying wall thickness within each tube, we are able to tune the ride characteristics of each frame for an enhanced riding experience without sacrificing weight.

Titanium has always been heralded as a dream metal. Its light weight, high strength and non-corrosive properties makes it ideal for applications that demand exceptional performance in a variety of conditions. Finding a calling in bicycle framesets, titanium offers the perfect blend of efficient power transfer with inherent vibration-damping. At half the weight of steel yet with 30% more strength and zero need for protective finishes, titanium truly is a wonder metal.

ACOR titanium frames, parts and accessories take advantage of this material to offer the best performing products on the market. Our carefully selected 3AL/2.5V and 6AL/4V alloys combined with our high precision, aerospace-grade manufacturing processes benefit you, as the rider, ensuring the best possible products available.

Titanium

AEROSPACE GRADE

ACORti uses aerospace grade titanium in high quality Ti3Al/2.5V and 6Al/4V titanium alloys for the right material to yield the perfect riding experience.

PRECISION CRAFTED

The perfect titanium frame is achieved using the highest quality tubing and geometry. We precisely control every detail tubing shape, length, diameter and wall thickness to optimize function and feel.
